

# KwikTag® Distributed Capture Appliance

## Turnkey Document Imaging.

KwikTag is as easy to deploy as it is to use. It provides accelerated value because it is delivered as a complete, pre-installed system - all on a Distributed Capture Appliance (DCA). This state-of-the-art delivery provides a productive, secure and affordable way for you to capture your critical business documents electronically.

Based on Microsoft Technologies, this turnkey solution includes all the components that are required to run KwikTag. The application software, hardware and operating system are bundled to simplify the acquisition, installation and deployment process.

The KwikTag DCA delivers even more value because upgrades and product updates are automatic – once plugged into the network, it is virtually maintenance-free. Updates are packaged and sent to the DCA via the Internet.

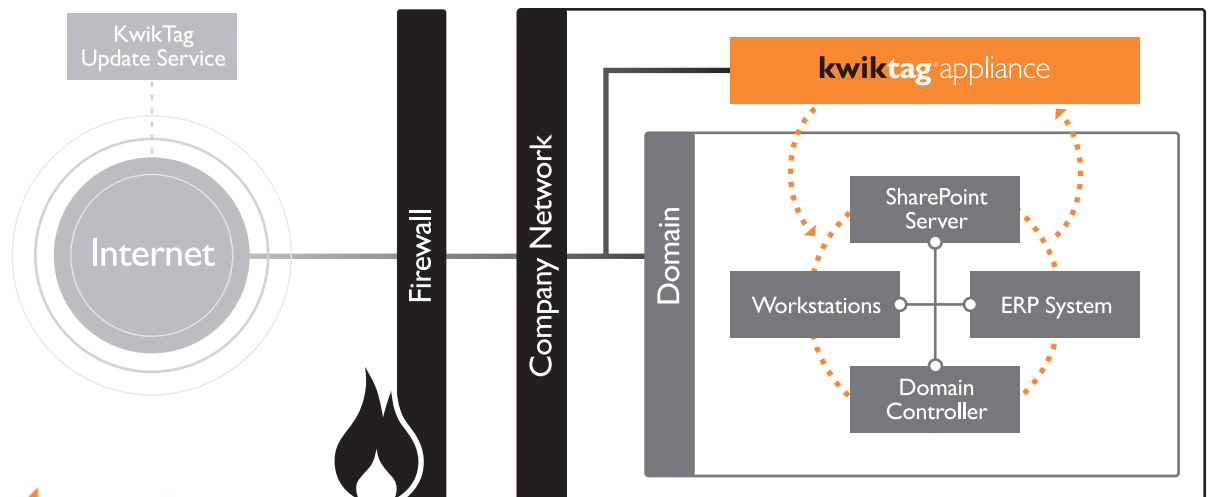

### A Turnkey Solution

- Bundled components for simplified acquisition, installation, deployment and maintenance
- Includes pre-installed server hardware, Windows Operating System and the application software
- Plug-and-Play technology is ready for immediate use
- No need for additional software or licenses
- Optimized for KwikTag document imaging

### Single Source for Support

- Hardware, software and solution all supported by ImageTag
- Automated maintenance updates

The KwikTag Distributed Capture Appliance provides automated updating of both the application and underlying operating system from the KwikTag Update Service. This innovative delivery model is available in a variety of sizes to match your specific solution requirements.

## KwikTag Distributed Capture Appliance (DCA) Facts

- An appliance is a tightly integrated combination of software and hardware, highly optimized and tuned for a very specific IT operation. Since an appliance is tethered to the Internet, it can update itself and repair/recover from defects, and enhance its capabilities automatically. As such, an appliance has a low Total Cost of Operation.
- The KwikTag DCA is delivered with Microsoft Windows Server OS and SQL Server.
- Your network is secure because the KwikTag DCA sits off the domain. All interaction to and from the appliance occur over standard and open Internet protocols that can be monitored and traced using any standard security infrastructure your IT department has in place. The Appliance includes virus protection software that is updated via its connection to the Internet.
- The KwikTag DCA introduces an administrative feature called Active Directory Sync. The result delivers single account administration. Because the KwikTag DCA is connected to the network but is not part of the domain, you can set-up accounts and leverage your existing accounts/groups.
- The KwikTag DCA is configured to support growth in an organization. Use the document volume that your organization currently processes on an annual basis to determine the appropriate DCA (see table below). Because a DCA will support an annual volume increase of 100%, both standard configurations can accommodate between three and five years of storage.
- The KwikTag DCA is guaranteed. ImageTag is responsible for the reliability and availability of the whole solution. If the system is down for any reason, software or hardware, ImageTag will provide the necessary assistance, as long as the KwikTag Support Agreement is maintained.
- To facilitate backup at your location, the KwikTag DCA is configured to allow access for standard backup software to sweep SQL backups and the image repository.

DCA	Users	Documents (000s)	Pages (000s)
1000	20	150	375
2000	50	300	750

### KwikTag DCA 1000

Processor Intel CORE 2 DUO, 2.13 GHZ, 2M CACHE	Hard Drives 2x 250GB
System Memory (RAM) 4GB	RAID-1

### KwikTag DCA 2000

Processor Intel QUAD CORE XEON X3220, 2.40GHZ, 8M CACHE	Hard Drives 3x 250GB
System Memory (RAM) 4GB	RAID-5
